

[EMCO innovations at AMB]

emco group

Designed for your profit

EMCO will be presenting two new models from its production turning range based on the size 65 module kit. These supplement the existing models HYPERTURN 65-1300 DUOTURN/TRIPLETURN and POWERMILL. The new additions are the **HYPERTURN 65-1000** and **MAXXTURN 65-1000**, now featuring 65, 75 and 95 mm bar capacity, a high-performance counter spindle and Y-axis in all tool slides.

For milling applications, EMCO will be presenting the **EMCOMILL EM 750** and **MMV 2000** at AMB 2014. Both of these floor-type CNC machining centres are ideally suited for small to medium batch sizes. The new **EMCOMILL 750** supplements the existing vertical 3-axis milling machine range. The solid machine base and powerful milling spindle enable the cost-effective machining of workpieces with a weight of up to 800 kg.

For the training sector, EMCO will be premiering the new **Concept Turn 260** as a continuous further development of the Concept Turn 250 - the machine will be demonstrated in an **Industry 4.0** automation scenario with a **Mitsubishi robot** and **RFID component recognition**. The installation was developed in collaboration with FESTO Didactic, a longstanding cooperation partner of EMCO.
