

Machining of complex high-tech parts with HYPERTURN 45

Machine pool at Brisker comprising numerous EMCOTURN 332, HYPERTURN 665 and HYPERTURN 45.

Brisker GmbH

The success story of Brisker GmbH started in 1950 when Johan Brisker Sr. founded the company as a traditional metalworking shop. As a major milestone, the company was commissioned to manufacture the Austrian national eagle, which continues to look down upon the country's parliamentary chamber to this day.

The company's early activities included all aspects of metalworking and machining. However, under the current president, Johann Brisker, it has specialized in the manufacture of precision turned and milled parts. The company's 25 employees, who work on an 800 m² shop floor, act as suppliers to all industrial sectors. They mostly produce small or microparts in series running from 50 to 5,000 pieces in all standard materials, such as stainless steel, aluminum, or titanium. Complete assembly of individual components is also available upon request.

25 employees (2009)

Requirements profile

- High productivity for series production
- Complete machining from bar stock
- Y-axis and driven tools
- Compatibility with existing tool holders
- Interchangeability of existing clamping devices
- Compact dimensions incl. bar loader (short bar loader)
- Siemens control compatible with the existing machine pool
- Competent and reliable customer service

„For this range of parts in particular, there is simply no comparable two-spindle machine on the market that offers such a high level of precision from such a small footprint.“

Ing. Johann Brisker

EMCO customer from the outset

In the field of turning in particular, there is a strong drive to manufacture parts in line with the current state of the art. Which is why Johann Brisker bought the first EMCOTURN 320 in 1987. The company president was so pleased with the machine from Hallein that he went on to purchase nine EMCOTURN 332 with counter spindles and two turrets.

All turning machines were automated with (short) bar loaders in order to meet the high requirements posed in terms of cost effectiveness.

Over the years, the two companies came to view each other as partners: „Since we work relatively closely with EMCO, we often see ideas that originate from our longstanding experience in the manufacture of precision turning parts being incorporated into the new machine models manufactured by EMCO. This is something of which we are particularly proud,“ says Brisker.

HYPERTURN 45: Practically unrivaled

When the company needed an additional CNC lathe for a specific size of parts in 2009, it once again approached EMCO with its particular needs. Following the positive experience of „complete machining“ using two HYPERTURN 665 which had likewise been purchased from EMCO, Brisker decided that the most important criterion was complete machining from bar stock.

Although the market for this is not exactly flooded with models, especially at the smaller end of the parts spectrum, EMCO had recently launched its HYPERTURN 45, which provided the ideal solution for the range of parts required at Brisker. This new counter-spindle machine features two turrets, driven tools on both turrets and a Y-axis, all combined in an extremely space-saving form.

A quick look in the production hall highlights the importance of the latter factor for Brisker. „Our machine hall is designed and planned down to the very last corner, „ explains Johann Brisker, „which means that the machine footprint is always one of our key criteria.“

A further advantage of using the same or related machines with the same control technology is program compatibility. Since Brisker continues to use workshop programming for turning, this has certain benefits for the flexibility of the machine pool. However, this was not the only reason why Johann Brisker decided on the

HYPERTURN 45. The company president was also impressed by the hard technical data.

Increasing productivity through technology

The most striking aspect of the HYPERTURN 45 is its small and compact construction, which conceals a surprising amount of technology: high-performance main and counter spindles, two turrets for up to 12 tool adapters, water-cooled, integrated spindle motors, dynamic digital drives, and thermo-symmetrical machine construction.

One great benefit of the HYPERTURN 45 over the EMCOTURN 332 is a Y-axis with a 70 mm traverse path in the upper slide system and a Z2-axis in the lower slide system. As with the HYPERTURN 645/665, the main and counter spindles are equipped with integrated, water-cooled spindle motors with drive power of 15 kW, a maximum speed of 7,000 rpm, and torque of 100 Nm. „The high dynamics mean that we have to install harder vibration dampers and screw the machine to the floor at four points, rather than just two,“ explains the company president.

The spindle length of the HYPERTURN 45 was adjusted to match the short loader magazine. „It can process the typical bar stock of one meter without the need for an additional support,“ says Gerhard Nebohy, the responsible sales technician at EMCO. The large dimensions of the counter spindle connection with A2-5 enable the counter spindle to be used to remove barstock parts with a diameter of up to 45 mm, while the latest control and drive

„Our customers aren't just interested in increasing productivity. They also want backward compatibility with existing NC programs and often have large quantities of tool holders and clamping devices that need to be reused.“

Gerhard Meisl, EMCO Senior Product Manager

Simultaneous turning work is possible using both turrets on the main or counter spindle.

Range of parts: As an industrial supplier to all sectors, Brisker GmbH manufactures turned and milled parts in series from 50 to 5,000 pieces from all standard materials

system, Siemens 840D-sl (solution line), makes the machine quick and easy to program. When coupled with the CAM solution Esprit from DP Technology, the HYPERTURN 45 becomes a high-tech production center with 3D simulation.

Finishing on the counter spindle

The company president also has a specific example to demonstrate the system's outstanding technical performance: Complete machining of a workpiece with a high level of milling content (approx. 50 percent) on the EMCOTURN 332 lasts around three minutes, which is already a good time. Without any program optimization, the HYPERTURN 45 has already reduced this machining time to under two minutes - representing an improvement of around 35 percent. „For parts with a large number of turning operations, the average increase in productivity is 20 percent. This has been achieved solely through the significantly higher dynamics, faster rapid traverses, and reduced tool changing times,“ explains Gerhard Nebohy.

Service levels influence purchasing

Johann Brisker is also extremely happy with the service reliability and after-sales support provided by the tool manufacturer from Hallein: „It's one of the main reasons we decided on EMCO. The availability of spare parts and the company's response times are exemplary.“ He is also full of praise for the ergonomics and design of the system: „Ergonomic considerations in particular, such as locating the spindle and turret within easy reach of the machine operator, are essential for fatigue-free operation. The EMCO design is extremely well thought out in this regard.“

Excellent value for money

„We don't just blindly buy EMCO out of habit - we also use CNC machines from other manufacturers. However, for this range of parts in particular, there is simply no comparable two-spindle machine on the market that offers such a high level of precision from such a small footprint,“ says Johann Brisker, who is clearly impressed with the HYPERTURN 45. The fact that this Viennese company received the world's first HYPERTURN 45 should also not go unmentioned.

Storage location for the removable tool measuring arm

[Technical data] HYPERTURN 45

Working area	
Swing over bed	Ø 430 mm (16.9")
Swing over cross slide	Ø 300 mm (11.8")
Distance from main spindle to counter spindle	720 mm (28.3")
Max. turning diameter	Ø 300 mm (11.8")
Max. part length	480 mm (18.9")
Max. bar capacity	Ø 45 (51) mm (1.8"(2.0"))
Travel	
Slide travel in X/X2	160/150 mm (6.3"/5.9")
Slide travel in Z/Z2/Z3	510/510/510 mm (20.1/20.1/20.1")
Travel in Y	+40/-30 mm (+1.6"/-1.2")
Main spindle	
Speed range	0–7000 rpm
Max. torque on the spindle	100 Nm
Spindle nose DIN 55026	A2-5
Spindle bearing (inner diameter at front)	Ø 85 mm (3.3")
Spindle bore	Ø 53 mm (2.1")
Counter spindle	
Speed range	0–7000 rpm
Max. torque on the spindle	100 Nm
Spindle nose DIN 55026	A2-5
Spindle bearing (inner diameter at front)	Ø 85 mm (3.3")
Spindle bore	Ø 53 mm (2.1")
C axes	
Resolution	0,001°
Rapid motion speed	1000 rpm
Spindle indexing (disc brake)	0,01°
Drive power	
Main spindle	15 kW (20.1 hp)
Counter spindle	15 kW (20.1 hp)
Tool turrets 1+2	
Number of tool positions	2 x 12
Tool holding shaft in accordance with VDI (DIN 69880)	VDI 25
Tool cross section for square tools	16 x 16 mm (0.6"x0.6")
Shank diameter for boring bars	Ø 25 mm (1.0")
Revolver switch time	0.2 sec

Driven tools 1+2	
Speed range	0–6000 rpm
Torque	16 Nm
Drive performance	4 kW (5.3 hp)
Number of driven tools	2 x 12
Feed drives	
Rapid motion speed X/Y/Z	30/15/45 m/min 1181/590.5/1771 ipm
Feed force in the X axes/Y axis	4000 N (900 lbs)
Feed force in the Z axis	5000 N (1124 lbs)
Feed force in the Z axis counter spindle	6000 N (1350 lbs)
Position variation Ps (VDI 3441) X/Y/Z	3/3/3 µm
Coolant system	
Tank volume	200 l (52.8 gal)
Pump power standard	0.62 (1.1) kW (0.82(1.46 hp))
Pump capacity at 3.5 bar/1 bar	12.5/58 l/min (3.3/15.3 gal/min)
Pump capacity at 10 bar/5 bar (optional)	15/40 l/min (3.9/10.4 gal/min)
Power consumption	
Connected load	30 kVA
Supply pressure	6 bar (87.0 PSI)
Dimensions/weight	
Height of center above floor	1126 mm (44.3")
Machine height	1985 mm (78.1")
Space occupied BxT (not including chip conveyor and coolant)	2650 x 1950 mm (104.3 x 76.8")
Total weight of machine	4200 kg (9,259.4 lb)
Safety devices	
	CE compliant
